Ordering components for 3rd year projects.

- Components should only be ordered from **Onecall**. The website is <http://onecall.farnell.com>
- If you are ordering ICs or passive components, please check the package type. Most components are now available in small surface mount packages (SMD) which can be very difficult to solder onto your circuit board. Please make sure you order the correct package type for your circuit.

- Check if there is a minimum order quantity. Many passive components will have a minimum order quantity of 5, 10 even 50. Some ICs are sold in tubes of 25 or 50 as well as individually. Make sure you are not ordering a tube of 25 when you only need one.

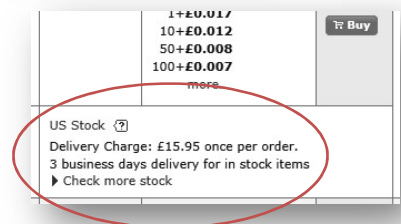

Minimum 1

Minimum 5

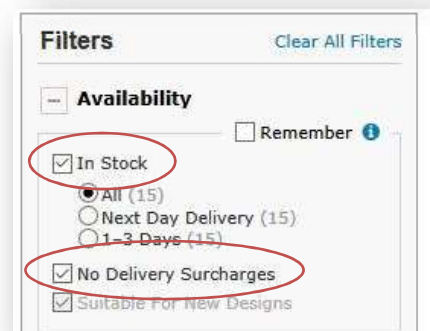

- Some components on the Farnell website are US stock only (takes at least a week to be delivered) and/or incur a delivery surcharge.
Do NOT select these components – they WILL NOT be ordered.

- Check that the components you wish to order are in stock. If they are out of stock they may not arrive in time for you to use in your project. Please search for an alternative component.

* Note that items incurring a Delivery Surcharge and out of stock items can be excluded from the search by ticking the relevant boxes in the filter pane.

- Orders should be checked and given to the EIETL Laboratory Manager by a demonstrator.
- Components may arrive the next day (only if all orders received by 1:00pm), however two days is generally a more reliable expectation.
Consequently, goods ordered on Monday are likely to arrive Wednesday afternoon, those ordered on Thursday are likely to arrive Monday afternoon, those ordered on the Bank holiday take an extra day and are likely to arrive Thursday afternoon and those order after the Bank holiday are unlikely to arrive before the end of the project.
